## Experience

My experience has been focused on the planning and implementation of web development projects, under the principles of agile development mythologies such as Scrum and version control systems such as GIT. I have assumed roles in both Backend and Frontend using frameworks such as Django, Vue, Angular and micro Frameworks such as Flask. In addition to this, I have experience in handling SQL and NoSQL databases.

I consider myself an analytical person, who has skills in handling requirements and understanding problems, I am creative and I coordinate well with others. In addition to this, I like to participate in the planning and leadership of projects, always looking for new challenges that allow me to grow professionally and personally.
